# Programme: **Monday 18 May**

**2-3.30pm** PARALLEL SESSION

## British Oculoplastic Surgery Society (BOPSS) satellite session : Just what is it that makes today's Oculoplastics so different, so appealing?

Oculoplastics is an inherently interdisciplinary specialty that sits at the crossroads of several clinical domains and naturally crosses traditional specialty silos , reflecting the anatomical and functional complexity of the periocular region. Oculoplastic surgeons routinely collaborate across these boundaries—managing conditions that affect vision, facial form, neural pathways, adnexal structures, and systemic disease processes. This multidisciplinary integration allows the specialty to deliver highly specialised, patient-centred care that bridges gaps between disciplines and ensures comprehensive management of both functional and aesthetic problems around the eyes and face.
BOPSS presents a satellite session designed to provide all ophthalmologists—regardless of subspecialty—with essential updates and practical insights into oculoplastic conditions and their management.

This session will ensure attendees are equipped with the latest knowledge and best practices to enhance patient outcomes in daily clinical practice.

Chairs : Mr Saj Atullah BOPSS President & Miss Vickie Lee

1 MDT approach to Orbital Disease Mr Saj Ataullah Manchester

2 Endocrinology and Ophthalmology Conversations in Thyroid Eye Disease managementManagement Professor George Kahaly Mainz Germany & Miss Vickie Lee London

3 Lacrimal System Disorders Mr Colin Vize Hull

4 Little faces, Big Challenges: Navigating acute paediatric oculoplastics Miss Katya Tambe Nottingham
