

Syllabus Area	Detail	Cert LRS Focus				OST Theme	OST domain	Maps to OST Curriculum code (where relevant)
Basic anatomy, physiology and optics	Anatomy	Corneal Epithelium, composition and thickness profile Corneal stroma, composition and profile Anterior Chamber Iris, Ciliary Body Posterior Chamber Posterior Segment in relation to Refractive surgery, Retina in Myopia, Vitreous body				How the Ophthalmologist approaches their practice	Basic & Clinical sciences	BSC1
	Physiology	Corneal Epithelium Physiology, Corneal Stroma, composition and thickness profile Physiology of Healing Cornea, in particular the epithelium				How the Ophthalmologist approaches their practice	Basic & Clinical sciences	BSC2
	Optics	Snellen optics, Ray tracing, Vertex calculation,				How the Ophthalmologist approaches their practice	Basic & Clinical sciences	BSC 6
Refractive Error, Hypermetropia, Myopia, Astigmatism,								

		<p>Hypermetropia Myopia Astigmatism</p> <p>Corneal Anterior Posterior Residual</p> <p>Lenticular Retinal</p>			
		<p>Principles of Spectacle correction</p> <p>Positive and negative lenses Positive and negative cylinder format</p>			
		<p>Accommodation theory</p> <p>Helmholz Fincham Coleman united theory Abberations</p>			
		<p>Presbyopia Onset and progression</p>			
		<p>Presbyopia correction</p> <p>Bifocals Varifocals Multifocal contact lenses</p>			
		<p>Abberations Lower and higher order Mathamatics of higher order</p> <p>Zernicke Series Coefficients Taylor Series, Fourier Analysis, Zonal Reconstruction</p> <p>Corneal vs. whole eye abberations and centration relativity</p>			
		<p>Visual Acuity General optical principles Snellen Charts LogMAR charts and principles</p>			
Pre-op Assessment for Refractive Surgery	History	<p>History as is relevant for refractive surgery</p> <p>Including criteria Relative and absolute Exclusion criteria</p>	What the Ophthalmologist is able to do	Clinical Assessment	CA1

		<p>Vision questionnaire (Fraenkel-Lawless; McAlinden)</p> <p>Refractive history including contact lenses Ophthalmic history</p> <p>Corneal</p> <p>Keratoconus Infections Trauma Recurrent erosions</p> <p>Blepharitis</p> <p>Dry eye Amblyopia Strabismus Glaucoma Ocular medications</p> <p>Ocular surface Disease index</p> <p>General medical history</p> <p>Diabetes Autoimmune Irritable Bowel Fibromyalgia, chronic fatigue HIV or Hepatitis Malignancy Psychiatric</p>				
	Examination/Investigations	Vision	Acuity at distance, intermediate and near	What the Ophthalmologist is able to do	Clinical Assessment	CA2
		Refraction	Objective	Auto-refraction Aberrometry - undilated (Distance - near)	What the Ophthalmologist is able to do	Practical Skills

			Retinoscopy (including cycloplegic retinoscopy)			
		Subjective Focimetry				
		Ocular dominance				
		Pupil		What the Ophthalmologist is able to do	Clinical Assessment	CA6
		Ocular motility binocular vision		What the Ophthalmologist is able to do	Clinical Assessment	CA7 PI 12
		Visual fields		What the Ophthalmologist is able to do	Patient Investigations	PI 13
		Corneal Topography	Topography	What the Ophthalmologist is able to do	Patient Investigations	PI 2
			Placido system principle Curvature maps: axial and tangential maps Power/radii conversion Asphericity Parameters/indic es Normal Topography			
		Tomography				
			Slit-lamp scanning principle elevation maps (front and back surface) Best fit surfaces			

				<p>Pachymetry maps (thickness progression maps) Normal front and back surfaces maps</p> <p>Topography, tomography Pachymetry corneal thickness, epithelial thickness</p>			
		<p>Screening for Keratoconus</p>					
		Pupillometry					
		Aberrometry	<p>Clinical correlation and impact on vision Positive and negative impact of higher order aberrations Dilated aberrometry</p>				
		Contrast sensitivity					
		Slit lamp	Tear film				
				<p>Eyelids, lid margin bulbar/tarsal conjunctiva Tear film prism and break up time (TBUT) Schirmer 1b</p> <p>Stains (Fluorescein, Rose Bengal, Lissamine Green)</p>	<p>What the Ophthalmologist is able to do</p>	Clinical Assessment	CA9
			Cornea Angle				

		Lens Tonometry	LOCS classification)			
		Fundus	Dilated fundus examination	What the Ophthalmologist is able to do	Clinical Assessment	CA10
		Ultrasound Pachymetry	Single point measurement Minimum thickness			
		Other tests	Optical coherence tomography (OCT)			
			Corneal thickness Epithelial thickness Corneal power Anterior Segment Retinal assessment (macular and optic disc)			
			Endothelial Microscopy Binocular vision as relevant to refractive surgery			
Pre operative assessment for Lens based surgery		History		What the Ophthalmologist is able to do	Clinical Assessment	CA1
(As for Laser refractive surgery)		Examination	Consideration of regular or irregular astigmatism Corneal scars Corneal endothelium	What the Ophthalmologist is able to do	Clinical Assessment	CA2
			Specular microscopy			
			Consideration of combined surgery with DMEK/DSAEK	What the Ophthalmologist is able to do	Patient Investigations	PI 12
			Biometry Multifocal intraocular lense considerations			

		<p>Pupil size (mesopic, photopic) Pupil shift Angle Kappa</p> <p>Quality of vision tests and quality of life tests Pupil effects on subjective quality of vision/life</p>			
Theory of Laser Refractive Surgery		Principles of Excimer laser photo-ablation	How the Ophthalmologist approaches their practice	Basic & Clinical sciences	BCS 12 & PM17
PRK/LASEK/Epi-LASIK		<p>Surface ablation</p> <p>PRK LASEK Epi LASEK</p>			
LASIK		<p>LASIK</p> <p>Technological advancements</p> <p>Broad beam to flying spot laser Manual microkeratomes Eye tracking Centration of refractive surgery Ablation profiles</p> <p>Optical Zone diameter Asphericity Wavefront-optimised Topography-guided Presbyopic profiles</p>			
SMILE		<p>Femtosecond laser lenticule extraction</p> <p>FLEX SMILE</p>			

	Pathology	<p>Safety calculations and corneal biomechanics</p> <ul style="list-style-type: none"> Residual stromal thickness Pachymetry errors Flap thickness bias Ecasia Risk <p>Model of post-operative tensile strength</p> <p>Wound Healing Modulation of wound healing</p>	How the Ophthalmologist approaches their practice	Basic & Clinical sciences	BSC2 BSC4
LASIK		<p>Surgical Protocol including management of intraoperative complications</p> <ul style="list-style-type: none"> Standard operating procedure and modifications with justification Preparation <ul style="list-style-type: none"> Centration Alignment Patient positioning Microkeratome checks (if manual keratome) Exposing eye <ul style="list-style-type: none"> Drape Speculum insertion Surface marking Suction ring Microkeratome Head <ul style="list-style-type: none"> Microkeratome lubrication Microkeratome engagement Microkeratome Pass 	What the Ophthalmologist is able to do	Surgical Skills	

		<p>Suction with femtosecond laser Lifting the flap</p> <p>Ablation</p> <p>Repositioning the flap Removing the speculum immediate post op check</p>	<p>Microkeratome disengagement Microkeratome completion Patient repositioning Eye tracker activation Aiming beam</p> <p>Sponge placement Flap lift Time to ablation Drying of corneal bed</p> <p>Aiming beam Flap hinge protection Laser activation</p>			
Ectasia	(Keratoconus)	<p>Mangement of Ectasia</p> <p>Cross linking Intra-corneal rings and contact lenses Cross linking and PRK/SMILE (Athens protocol)</p>		What the Ophthalmologist is able to do		
Technology and theory of lens based refractive surgery		<p>Phakic intraocular lens Refractive lens exchange</p>		How the Ophthalmologist approaches their practice		

		Biometry Lens power calculations Astigmatism calculations	What the Ophthalmologist is able to do	Patient Investigations	PI 12
		Corneal incision placement Corneal astigmatism/IOL cylinder/Total astigmatism Axial length measurement Keratometry Total corneal power measurement Estimated lens position Intraoperative aberrometry Biometry after corneal refractive surgery - formulae IOL types Monofocal Toric Multifocal Phakic intraocular lens Piggyback Conventional phacoemulsification surgery Femtosecond laser cataract surgery Extra-capsular cataract surgery	What the Ophthalmologist is able to do	Surgical Skills	SS4

		Endophthalmitis prophylaxis Bioptics	What the Ophthalmologist is able to do	Patient Management	PM7
Cataract / Lens surgery and intra- operative complications		Surgical Protocol including management of intraoperative complications	What the Ophthalmologist is able to do	Surgical Skills	SS4
		Active pre operative management of ocular surface Blepharitis HSK prophylaxis Other potential infections Surgical field sterilisation Lacrimal apparatus infection management			
		Anaesthesia			
		Corneal incision/astigmatism management Planar hinged			
		Arcuate keratotomies Opposite clear corneal incision on-axis incision capsulorrhexis Hydrodissection			
		Phacoemulsification Divide and conquer Chop Stop and Chop			
	IOL implantation IOL implantation in aphakia Intracameral subconjunctival antibiotics				

		Sealing of section Shield			
Correction of Regular and Irregular Astigmatism		Regular astigmatism Vector analysis of regular astigmatism Laser correction: Eye tracking and cyclotorsion IOL correction: Lens tilt Corneal incisions			
		Irregular astigmatism Advanced diagnostics Surgical Management PTK Topography guided Wavefront guided Stromal topography			
Phakic IOLs		Technology and theory of phakic IOLs Biometry for phakic IOLs Types of phakic IOL Conventional surgery	Sulcus to sulcus White to white Anterior chamber Posterior chamber Iris fixed	How the Ophthalmologist approaches their practice	
		Phakic IOLs surgical protocol		What the Ophthalmologist is able to do	

		<p>Posterior chamber</p> <p>Iridectomy Incision IOL upload and insertion IOL positioning</p> <p>Iris fixated</p> <p>Incision Enclavation Iridectomy</p> <p>Angle supported</p> <p>Incision IOL insertion Iridectomy</p> <p>Management of complications on iris, cornea and lens</p>			
Presbyopia		<p>Refractive surgical correction of Presbyopia</p> <p>Excimer laser for presbyopia</p> <p>Multifocal profiles Monovision Modified monovision</p> <p>Corneal inlays Multifocal IOLs Monofocal IOL with monovision</p> <p>Aspheric monofocal IOL and monovision Light adjustable lens (Calhoun)</p>	What the Ophthalmologist is able to do	Surgical Skills	
High Ametropia		<p>Correction of High Myopia/Hyperopia</p> <p>LASIK/PRK/SMILE</p> <p>Safety considerations Biomechanics Limits</p> <p>Phakic IOLs Refractive Lens Exchange</p>	What the Ophthalmologist is able to do	Surgical Skills	

Post operative complications of lens based refractive surgery		Post op Follow up of Lens based surgery	Routine management overview guide All	Refraction Visual Acuity Slit lamp of anterior and posterior segment IOP	What the Ophthalmologist is able to do	Patient Management	
			Day 1-7	Exclude the following IOL rde-centration endophthalmitis retinal detachment choroidal effusion suprachoroidal haemorrhage dysphotopsia Cystoid macular oedema (CMO)			
			Month 2-3	CMO Lens position/tilt Aberrometry Capsulorrhesis size and shape Quality of vision, quality of life questionnaire			
			Month 3 and 12 months	Night vision history IOP measurement			

			<p>Retinal complications</p> <p>Quality of vision, quality of life questionnaire</p> <p>Posterior capsule opacification</p> <p>Tear film assessment</p>			
		<p>Post op asesment and management of complications of laser refractive surgery</p>	<p>Routine management</p>	<p>Day 1, first month, 3 month and 12 months</p> <p>Routine testing</p> <p>Refraction</p> <p>Visual acuity</p> <p>Topography</p> <p>Tomography</p> <p>Slit lamp</p>		
				<p>Day 1</p> <p>Epithelial defect</p> <p>DLK</p> <p>Microfolds</p> <p>Interface debris</p> <p>Oedema</p> <p>Infections</p>		
				<p>Month 1</p> <p>Corneal oedema</p> <p>Epithelial ingrowth</p> <p>Visually significant glare</p> <p>Dry eye</p>		
				<p>3 and 12 months</p>		

			<p>Dry eye diagnosis and management Night vision complaints Regression</p> <p>Epithelial thickness changes Keratometry changes Biomechanical changes and ectasia risks</p> <p>IOP measurement Satisfaction questionnaires</p>			
Retreatments		<p>Retreatment for corneal refractive surgery</p> <p>Flap lift PRK SMILE options Safety calculations</p>	<p>What the Ophthalmologist is able to do</p>	<p>Surgical Skills</p>		
		<p>Retreatment for lens based refractive surgery</p> <p>Lens exchange/extraction Piggyback lens Bioptics/corneal refractive surgery</p>				
Good Medical Practice		<p>Compassion</p> <p>Autonomy Considerate approach Empathy</p>	<p>How the ophthalmologist approaches their practice</p>	<p>Attitudes, Ethics & Responsibilities</p> <p>Attitudes, Ethics & Responsibilities</p>	<p>AER1</p> <p>AER2</p> <p>AER3 AER4</p>	

		Confidentiality Limits Help Multi-source Feedback Appraisal and revalidation Ethical approach Probity Duties of a doctor			AER5 AER6 AER7 AER8 AER9 AER10 AER11 AER12
		Evidence based approach	How the ophthalmologist approaches their practice	Decision making, clinical reasoning & judgement	DMRJ1
		Quality improvement		Decision making, clinical reasoning & judgement	DMRJ2
		Personal audit (theory, process, types of audit) Theory Process Types of audit used in refractive surgery Integration into clinical practice Standard setting		Decision making, clinical reasoning & judgement	DMRJ3
		Information - provision of written information	What the Ophthalmologist is able to do	Communication	C4
		Consent			C5
		Complaints			C9
		Other aspects of clinical governance			
		Advertising and marketing Governing bodies Patient and public involvement (PPI) Laser safety and regulations			

		<p>Pillars of clinical governance</p> <ul style="list-style-type: none"> Clinical effectiveness and research Audit Risk management Education and training PPI Using information and IT Staffing and staff management 			
		Risk management			
		CPD	The Ophthalmologist as a professional	CPD	
	Outcomes analysis	<p>Stability/Safety/Predictability/Efficacy</p> <ul style="list-style-type: none"> Define safety in laser refractive surgery: percentage loss more than one / two lines in postop BCDVA compared to preop Define efficacy in laser refractive surgery. Cumulative Percentage of patients with UCVA- 6/5,6/6, 6/7.5 etc Predictability:- scatter plot attempted versus achieved, perfect line and regression line demonstrates if in general under or over correcting, parallel lines +/- 0.5 and +/-1D Stability: achieved change in refraction over time 			
		<p>Definition of a nomogram</p> <p>Calculation of a nomogram</p>
